EXAMINER'S AMENDMENT AND REASONS FOR ALLOWANCE

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the specification, between the title of the invention and line 1, the following paragraph was inserted:

-- This application is a 371 of PCT/IB04/52285, filed November 3, 2004. --.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited on the PTO-892 each disclose a method and apparatus for suppressing cross-talk present in a read signal.

The following is an examiner's statement of reasons for allowance: the prior art of record considered as a whole fails to teach or suggest an apparatus or method for reading information from an information carrier (11) having tracks (9), comprising: a radiation source for generating a main beam (31) and two satellite beams (30, 32); objective means for directing the main beam (31) to a main track and the two satellite beams (30, 32) to locations adjacent to the main track; detection means for converting a reflection of the main beam (31) from the information carrier (11) to a read signal (C) which contains information of the main track, and for converting reflected satellite beams to satellite signals (S^+ , S^-) containing information of tracks adjacent to the main track; cross-talk removing means (28) for outputting an improved read signal (\hat{C}), comprising a first circuit for suppressing cross-talk of the adjacent tracks present in the read signal (C), characterized in that **the cross-talk removing means (28) further comprise a second circuit for outputting improved satellite signals (\hat{S}^+ , \hat{S}^-) by suppressing cross-talk of the main track present in the satellite signals (S^+ , S^-) by minimizing a correlation between the satellite signals (S^+ , S^-) and the read signal (C), the improved satellite signals (\hat{S}^+ , \hat{S}^-) being subsequently fed to the first circuit which is arranged to suppress the cross-talk of the read signal (C) by minimizing a correlation between the improved read signal (\hat{C}) and the improved satellite signals (\hat{S}^+ , \hat{S}^-).** (bold language emphasized)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
